Supported by:	CERT-in, Ministry of Information Technology & Fire and Security Association of India (FSAI)

Background :

The ongoing incidents of terror attacks around the world is leading to focused attention on homeland security issues of all concerned in many countries, especially in this part of the world. Prevention, response and investigation, all require a number of technologies cutting across disciplines. Prevention of terrorist attacks and detection of perpetrators is become vital in this area.

Post-26/11 attacks in Mumbai, India, the scope of homeland security has increased - ranging from aviation security, to infrastructure security and - increasingly – Cyber security which is the prime focus of the police organizations in India.

The first SAFE 2005 exhibition and conference on Safety and Security was introduced along with CII's Flagship event IETF- 2005 held in New Delhi. This was followed by the next two editions - in 2007 in New Delhi and 2009 in Bengaluru - both as focused shows along with IETF.

With the recent developments on security related areas within India, the organizers felt the need of holding this as an independent international event with a two day conference and a buyer seller meet to provide a platform to all stakeholders to interact and network under one roof. Hence SAFE 2010 in New Delhi. The main theme of SAFE 2010 is **'The future and technology of Internal/ homeland security in India.'**

Concurrent Events:

1. Two day International Conference on **'The future and technology of Internal/Homeland security in India**
2. Buyer Seller Meet

Special Pavilion

IT and Cyber Security
